

## Oscillations of the Exchange in Magnetic Multilayers as an Analog of de Haas–van Alphen Effect [Phys. Rev. Lett. 67, 493 (1991)]

D. M. Edwards, J. Mathon, R. B. Muniz, and M. S. Phan

An early version of Fig. 2 was printed. The correct figure is given below.

FIG. 2. Comparison of the exchange coupling  $J$  obtained from the asymptotic formula (11) (open symbols) with the exact result (solid symbols): Squares are for  $E_F = -1.05$ ; triangles for  $E_F = -0.95$ . Inset: The corresponding Fermi-surface cross sections. Arrows indicate the relevant caliper measurements proportional to  $(\text{period})^{-1}$ , an extended zone scheme being used in the left-hand inset to show the role of the  $2\pi/a$  shift.

## Hydrogen in the Submillikelvin Regime: Sticking Probability on Superfluid $^4\text{He}$ [Phys. Rev. Lett. 67, 603 (1991)]

John M. Doyle, Jon C. Sandberg, Ite A. Yu, Claudio L. Cesar, Daniel Kleppner, and Thomas J. Greytak

Three typographical errors are listed below.

On p. 603, fifth paragraph, the third sentence should read, "During that cooling the central density increased by a factor of 2.5 to  $4.0 \times 10^{13} \text{ cm}^{-3}$ ."

On p. 604, Eq. (1), should read

$$\tau(E)^{-1} = \eta(2E/MD^2)^{1/2} s(E). \quad (1)$$

The "s" was printed as upper case instead of lower case. The lower case  $s$  was referred to in the text.

On p. 605, third full paragraph, the third sentence should read, "The resulting values of the lifetime  $\tau(E)$  ranged from 60 ms at 20 mK to 300 ms at 1 mK."
